

General

Condition: (unfixed, fixed/intact, fragmented)

Membranes

Condition: (intact, ragged, fragmented/slimy, mucoid)

Color: (meconium stained)

Transparency: (translucent, opaque)

Membranous insertion: (marginal, circumvallate, circummarginate)

Point of rupture, distance to edge of disc:

Other: (amnion nodosum, any other lesions)

Cord

Appearance, coiling: (intact, shredded, fragmented/color/hypo coiled, hyper coiled, normal coiled)

Insertion, distance to margin: (central, eccentric, marginal, furcate, velamentous, interpositional)

Length and diameter:

Knot: (true, false)

Vessels: (2, 3)

Other: (thrombosis, rupture, perivascular hemorrhage)

Disc

Trimmed weight:

Diameter and thickness:

Shape: (# lobes, succenturiate, membranacea, ring, fenestrated)

Fetal surface: (describe any abnormalities within surface vessels, amnion and chorion)

Maternal surface: (intact, fragmented, ragged/adherent clot, calcs or fibrin-% of surface area)

Cut surface: (infarcts, thrombi, fibrin, tumors and any other lesions-%surface area)

Other:

Note: Measure and describe any separate blood clot within container.
